Life time extension Concept 20+

- Evaluation and testing of the continued operation of wind turbine generators (BPW) on land on basis of the principles of the BWE, the current DIBt guideline for wind turbines and the specifications and Standards of DNV GL

- 3-step procedure:

- 1 Practical part (visual inspection of the structure, machine and rotor, inspection of the turbine documentation, WTG-specific weak-point analysis)
- 2 Site-specific wind and turbulence report
- 3 Analytical part (site-specific load calculation, comparison with the type location, uncertainty evaluation, determination of the expected remaining life)
